1 Document Purpose

This document describes the Sales Data offered by Landgate and is a guide and reference for analysts and decision makers to make an assessment on the suitability of the data for their business use.

This document does not describe Landgate's Sales Reports (ie: xlsx, PDF reports) or the various methods of accessing the data.

2 What is Sales Data?

Sales Data contains information about historical and recent sales of freehold and leasehold properties within Western Australia, and comes in 2 parts with both residential and commercial (commercial, industrial, farming) properties:

1. Historical Sales Data (often referred to as Sales Evidence) - comprising sales records dating back to 1988 and lists the last 3 sales for a property (where applicable).
2. Incremental Sales Data – provision of weekly, fortnightly, or monthly updates.

The data is captured from 3 (three) individual sources detailed in [Section 6.1 \(Data Source\)](#) of this document and provides information relating to each sale (property transfer).

3 Pending Sales Data

Upon request and additional to the Historical and Incremental Sales data, are Pending Sales. Pending Sales data is provided within separate files to that of the Commercial and Residential Sales data outputs.

Records contained within the Pending Sales Data are not considered “sales” and must not be portrayed as such. Rather, they should only be used as an indicator that a sale is imminent (sale pending).

It should be noted that Pending Sales data contains only those pending sales that are within 7 days of settlement.

Pending Sales data is sourced from the Property Reporting Online portal, is received in the same structure as Historical and Incremental Sales data, and excludes buyer/seller details.

4 Key information

The following information provides for a high-level “fit for purpose” assessment of the data and other relevant information for users of the data.

At a high level, Sales Data contains the following:

- Transfer document number assigned by Landgate at document lodgement that uniquely identifies a transaction effecting a transfer of ownership.
- Land parcel identifier/s the subject of the transfer/sale.
- Property street address for the land sold (where applicable).
- Pending sale records (if requested with the data) does not include buyer/seller details and are not considered a “sale”.
- Consideration (dollar amount recorded on the transfer document or the dutiable amount assessed by RevenueWA, whichever is the greater) and at the date upon which the property was considered “sold”.
- Sale Date, in most instances this is the signing date for the offer and acceptance, where the offer and acceptance has not been provided this may be the RevenueWA stamping date or the document lodgement date within the Land Titling Register.

- Zoning and zoned land use applied to the land at the time of sale
- Actual land use classification for the property at the time of sale (vacant, commercial, rural, industrial, residential).
- Actual property classification at the time of sale (eg: vacant, house, unit, townhouse, showroom, factory etc).
- Property attributes (or improvements) such as number of bedrooms, bathrooms, garages, and other chattels etc the time of sale.
- Scheduled incremental updates available if required (eg: weekly, fortnightly, monthly etc)
- Buyer/seller details, including Certificate of Title details (only when the data is purchased with “Tenure”).
- Cadastral polygon identification numbers (PINs) enabling linkages to cadastral polygon data where available (lodged, current and retired cadastral polygon data).

4.1 Sale Types

There are 5 types of “sales” within the data:

1. Single lot sales.
2. Multi-lot sales where multiple properties have been sold within the one sale transaction/transfer.
3. Sale of Shares determined by a Transfer where only a portion or (share) of the property has sold.
4. Non-sales records are those where ownership has changed hands for \$0 eg: where a property may have been transferred by bequeathment.
5. Transfer of Lease where the transfer of lease document indicates a monetary consideration has been paid. This information is included and referred to as a “sale”.

Please note that there is no indicator in the .dat file to identify what sale types these transactions may be.

4.2 With or without Tenure

Sales data is available with or without Tenure data and is priced accordingly. The term “Tenure” in this context refers to buyer and seller details and includes the Register number/s (CT numbers) related to sale and will only include the first 2 proprietors as listed on the CT. For full current and historical ownership information, relevant title searching is required.

For more information contact CustomerExperience@landgate.wa.gov.au.

5 Accessing the data

There are 2 methods of access to the data, these are dependent upon the licensing arrangements for approved use of the data.

1. Online ordering via Landgate’s [Land Enquiry Service](#) with data parameters set by the user – generally used for personal and internal business use and is charged on a per record basis.
2. Scheduled data delivery by agreement where standard online licensing terms do not allow for the intended data use case. See [value-added-resellers](#) for more information.

For more information contact CustomerExperience@landgate.wa.gov.au.

6 Metadata

6.1 Data Source

There are 3 individual data sources that are drawn upon

to derive Landgate Sales data:

1. *Transfer of Land Act 1893* transfer documents lodged at Landgate that effect change in ownership. Information captured from these documents are stored in both historical datastores (sales evidence) and those current datastores that underpin the New Land Registry (NLR).
2. Valuations Database (Valuations Database): contains information gathered pursuant to the *Valuation of Land Act 1978*.
3. PRO (Property Reporting Online - formerly known as Electronic Advice of Sale – EAS): for pending sales information only

6.2 Data Format

For customers requiring a machine-readable data output, sales data is available in a generic fixed length ASCII data file format (.dat) with field width/length defined by the number of characters reserved for each field (refer to Data Dictionaries at Sections 7.1 & 7.2).

Screenshot of .dat file for residential property sales data demonstrating fixed width formatting:

It should be noted that the data schema differs between Commercial and Residential sales data outputs (refer 5.1 and 5.2 here-in) due to the different variables for the two property use categories needed for valuation purposes.

6.2.1 Historical Sales data

Due to the number of historical sales records (both commercial and residential), .dat files have been limited to 500,000 records per file. As of May 2022, this results in 5 files containing residential sales data and 1 file containing commercial sales data. It is available for whole of State or for the Metro-Mandurah region only.

As of May 2025, there are 7 files comprising historical sales information when both commercial and residential sales data is requested:

1. *Whole of State Extract - Commercial.dat*
2. *Whole of State Extract - Residential Part 1.dat*
3. *Whole of State Extract - Residential Part 2.dat*
4. *Whole of State Extract - Residential Part 3.dat*
5. *Whole of State Extract - Residential Part 4.dat*
6. *Whole of State Extract - Residential Part 5.dat*
7. *Whole of State Extract - Residential Part 6.dat*

Where Buyer/Seller (Tenure) details are requested, the filename will indicate accordingly, for example: *"Whole of State **Tenure** Extract - Residential Part 1.dat"*

6.2.2 Incremental Sales data

Incremental sales data are delivered at user defined intervals, (eg: weekly, monthly etc) as per the format shown at [6.2 Data Format](#).

6.3 Currency

Sales and Pending sales data is recorded daily from various processes, systems and document lodgement and is stored and retained within Landgate's various authoritative data stores.

6.4 Coverage

The whole of State (including Christmas and Cocos/Keeling Islands/Territories) with records dating back to 1988.

6.5 Accuracy

Information contained within the Sales Data outputs are sourced from multiple data sources as described in [Section 6.1](#) above. Whilst these data sources are considered authoritative, they service different purposes and legislative requirements which means information within each is often captured at different times within the property transaction and land development processes. Therefore, there will be instances where information pertaining to a property sale within the Valuations Database does not directly align with that of a sale as recorded within the land registry (NLR) from document lodgement or the historical Sales Evidence data source. As such, Landgate have developed a set of business rules to deal with these exceptions as best we can to provide the most complete picture of property sales and related property attribute information available at the time of sale, for the State of Western Australia.

7 Appropriate use

Use of Landgate data is for personal or internal business use only unless otherwise approved in writing by Landgate.

When purchasing the data online, users must accept and abide by the terms and conditions as set out within the "License Agreement" presented during the purchasing process.

If the data is required for alternative purposes (eg: commercial value-added product or service), Landgate approval is required in the form of a License Agreement, please contact CustomerExperience@landgate.wa.gov.au.

Information contained within the Sales Data outputs (including pending sales), is for information purposes only, is not guaranteed or warranted, and **should not be relied upon for legal purposes**.

For all legal requirements, original documents should be referred to.

7.1 Use of Pending Sales data.

A **Pending Sales record is not considered a "sale" and must not be portrayed as such**. Rather, Pending Sales records should only be used as an indicator that a sale is imminent (sale pending).

It should be noted that Pending Sales data, contains only those that are within 7 days of settlement. This business rule has been applied to lessen the likelihood of providing pending sales that may not progress to settlement.

8 Interpreting and using the data

The following aims to assist users in understanding the various aspects of Landgate's Sales Data and to assist further in fit-for-purpose assessment of the data.

8.1 Data Components

- The first 16 fields of the data contain information enabling identification of the property and information regarding use and classification of the property that is the subject of the sale record.
- With the exception of the [STATUS] fields, the next 20 fields contain information relating to the last 3 sales of the property that is the subject of the sale record.
- The next set of fields (25 for residential and 18 for commercial data) provide property attribute details (improvements) sourced from the Valuations database at the time of last sale.
- The remaining 2 fields [LEASEHOLD_STRATA] and [COMMUNITY_TITLE] are additional fields that may have an impact on the valuation of a property.

Note 1: Leasehold transactions will be identified by a # alongside the sale price within the pdf report and the xlsx file.

Note 2: Community Scheme transactions will be identified by a ## alongside the sale price within the pdf report and the xlsx file.

8.2 Sale Amount [SALE*]

The sale amount recorded in the [SALE*] field will be either the consideration shown in the transfer of land documents registered at Landgate or the dutiable amount assessed by RevenueWA, whichever is the greater. The sale amount for Valuer Adjudicated Sales is left blank (see [8.6.4](#)).

It is important to understand that for sales (transfers) that comprise multiple lots and/or titles, the sale amount is an aggregate of all lots sold within the transfer. The following examples help demonstrate this.

8.3 Sale records

The following seeks to describe the various sale types and records within the data and how they may be interpreted.

For demonstration purposes, the examples below show the sales data imported from the DAT files into PowerBI and grouped by APP1 (transfer document number).

8.3.1 Single lot sales vs multi-lot sales

Differentiation of these 2 sale types is important when analysing the data. Key to this is the [MULTI] field/s. For records where [MULTI]=1, this indicates that there are more than 1 property within the sale. Examples of the 2 sale types are below

Example 1: Single Lot sale – 1 transfer document, 1 lot. Note [MULTI1] = 0

APP1 / PARCEL ID	LAND_ID	CERT_TITLE	SALE1	DATE1	MULTI1
<input type="checkbox"/> G622054					
1D074038 0	0D74038	1917/646	2850000	1997-10-24	0

Example 2: Multi-lot sale – multiple lots sold within a single transfer. Note [MULTI1] = 1

APP1 / PARCEL ID	LAND_ID	CERT_TITLE	SALE1	DATE1	MULTI1
[-] I391369					
1D009474 0X	0D9474/2	1109/857	787575	2003-02-19	1
1D031785 27	27D31785	1661/276	787575	2003-02-19	1
1D037597 35	35D37597	1377/298	787575	2003-02-19	1
1D037597 36	36D37597	1377/299	787575	2003-02-19	1

It is important to understand that for multi-lot sales, the sale price recorded against each record will be that which is recorded within the Consideration section of the transfer document (ie: the total sale amount for the transaction and is not an apportionment of a value for each lot).

8.3.2 Multi-lot title sales

There are instances within a multi-lot sale where some or all lots comprising the sale, reside on a single Certificate of Title. For sales where this is the case, a record for each lot will be apparent with the title number being identical.

Example 3: Sale of a multi-lot title. Note the CERT_TITLE number is the same for all lots.

APP1 / PARCEL ID	LAND_ID	CERT_TITLE	SALE1	DATE1	PIN
[-] D846592					
1P016311 76	76P16311	1810/269	129000	1988-07-12	137380
1P016311 77	77P16311	1810/269	129000	1988-07-12	137374
1P016311 78	78P16311	1810/269	129000	1988-07-12	137382
1P016311 88	88P16311	1810/269	129000	1988-07-12	137373

Note: Where sales data excludes "tenure" details (ie: excludes [CERT_TITLE], [BUYER/SELLER]), then multi-lot title sales will not be discernible from multi-lot sales.

These transactions will be identified by a ** alongside the sale price within the pdf report and the xlsx file.

Where the multi-lot indicator = '0' then a single lot (land ID) is the subject of the sale.

Where the multi-lot indicator = '1' the sale is comprised of multiple lots (land IDs) and may also comprise multiple CTs.

Example 4: Sale information for multi-lot with multi-lot indicator

LANDID	APPLIC1	SALE1	DATE1	MULTI1	STATUS1	APPLIC2	SALE2	DATE2	MULTI2	STATUS2	APPLIC3	SALE3	DATE3	MULTI3	STATUS3
54D83677	0779068	315000	19/04/2021	0	0	L463877	78000	17/09/2010	0	1	F267635	52000	31/03/1993	1	1
54D83677	L463877	78000	17/09/2010	0	1	F267635	52000	31/03/1993	1	1					
54D83677	F267635	52000	31/03/1993	1	1										

8.3.3 Part lots

Historical processes have resulted in "part-lots" being apparent for some sale records within the data. This can occur where part of a lot remains following subdivision, or what's termed a "paper subdivision" occurred where only part of a lot may have been transferred to a new title without subdivisional survey.

Part lots are denoted by being suffixed with an 'X' within the [PARCEL_ID] and '#' for [LAND_ID] where '#' represents a numeric variable that is assigned to part-lots within the Valuation database.

eg:

[PARCEL_ID] = 1P000624 14X. Note for [PARCEL_ID], 'X' remains consistent across all lot

parts, therefore in this example the [PARCEL_ID] may be duplicated across multiple titles with different ownership.

[LAND_ID] = 14P624/**1**: where '1' is persistently related to the title for the lot part. In the example 4 below, two part-lot sales are shown. Note the [LAND_ID] suffixes and titles differ but the [PARCEL_ID]s are identical.

Example 4: 2 individual sales representing 2 parts of the same lot with separate titles.

APP1 / PARCEL ID	LAND_ID	CERT_TITLE	SALE1	DATE1	PIN
I282874					
1P000624 14X	14P624/ 1	1355/102	317500	2002-09-04	136986
G622450					
1P000624 14X	14P624/ 2	1588/155	170000	1997-10-24	136996

Example 5: Sale of a multi-lot title that includes a part-lot

APP1 / PARCEL ID	LAND_ID	CERT_TITLE	SALE1	DATE1	MULTI1	PIN
M693488						
1P007495 0	0P7495	1549/867	575000	2014-05-14	1	245991
1P007495 1X	1P7495/ 1	1549/867	575000	2014-05-14	1	171210
1P005649 44	44P5649	1549/867	575000	2014-05-14	1	249627
1P007495 52	52P7495	1549/867	575000	2014-05-14	1	11426736

8.3.4 Sales Containing Shares

Some sales pertain only to an entity's interests (shares) in a property, rather than its full market value. The [SHARE_INDICATOR1] field identifies these transactions, allowing users to choose how to treat these sale types in terms of analysis or representation.

Applicable values within the [SHARE_INDICATOR1] field are:

- Yes (transfer of shares)
- No (not a transfer of shares)

A common scenario is the adding or removing of an existing registered proprietor either in whole or in part.

Note1: Transactions for Sales containing shares will be identified by a ^ alongside the sale price within the pdf report and the xlsx file.

8.4 Identifying unique records

Where Certificate of Title details are included in the data, the fields of [LAND_ID], [CERT_TITLE], [DATE1] and [APP1] combined uniquely identify each record within the data.

Alternatively, where Certificate of Title details are **not** included in the data, the fields of [LAND_ID], [DATE1] and [APP1] combined, generally identifies unique records within the data. However, there are exceptions, refer to Section 8.5.v below.

8.5 Known exceptions and anomalies

There are anomalies or exceptions within the data where:

- for some sales records, reliable Valuation database information could not be sourced for the sale record.

- ii. when purchased with Tenure, there are some sales records where no buyer details are apparent for the title listed. This often occurs where land has been subdivided to new titles created where buyer details do not apply to the former title/s. Sourcing of original documents may be required in these instances.
- iii. common to many rural properties and apparent for some suburban lots, there are records that do not have a valid street address. This may occur where a valid street address was not assigned to the property at the time of sale.
- iv. PIN numbers may not be apparent for some sales records where a valuation entity (VEN) does not have a relatable PIN (as sourced from the SCDB). Generally, this will occur in 2 scenarios:
 - a. where the valuation sourced record is a strata unit/lot where a PIN will only relate to the parent land/lot.
 - b. when the valuation sourced record relates to a “lodged” land/lot (ie: land the subject of a proposed subdivision), and not the land/lot as per the transfer document.
 - c. Both scenarios above are a result of 2 data sources being captured and maintained for 2 different purposes.
- v. Due to historical land titling processes, some sale records may display duplication where multiple titles exist for the same [LAND_ID]. In such cases, the fields of [LAND_ID], [DATE1], and [APP1] will be identical. Users of the data should refer to the original legal documents to fully understand the details related to the sale.
- vi. In some cases, a single contract of sale may encompass multiple land parcels, in these cases a single duty certificate is issued for the entire transaction based on their combined value rather than an individual assessment. There is no requirement for these land parcels to be included within the same Transfer [APPLIC1]. These sales may display within the data with different document identifiers [APPLIC1]. While [SALE1] and [DATE1], may be identical, [LAND_ID], will still remain unique. It is important to note [APPLIC1] may or may not cover the entirety of the sale, yet all properties collectively form part of the same transaction (Ad Valorem).

8.6 Other information

8.6.1 Owner / buyer details (Tenure)

When purchasing Sales Data with Tenure, where a title has more than 2 listed registered proprietors, only the first 2 proprietors listed on the title are provided ie: Buyer1, Buyer2.

8.6.2 Non-sales records

Non-sales records are those where ownership has changed hands for \$0 eg: where a property may have been transferred by bequeathment.

8.6.3 Off the plan sales

Where property is bought “off the plan”, property attributes listed against the sale are those of the property or parent land at the time of sale, ie: not that of the purchased “future” unit.

8.6.4 Valuer adjudicated sales

Data captured in the [SALE*] fields are sourced from the “Consideration” section of transfer documents registered at Landgate and therefore may not reflect the Dutiable Amount where a “valuer adjudicated” stamp duty assessment may have been applied.

*These transactions will be identified by a *** alongside the sale price within the pdf report and the xlsx file.*

8.6.5 [NO_OF_UNITS]

[NO_OF_UNITS] is the number of “sub-valuation entities” (sub-properties or units), referred to as “sub-VEs”, within a “parent” valuation entity (or parent property) that may have had an impact on the valuation of a property (eg: number commercial units within a shopping centre). The values contained within this column, are captured at a point in time for valuation purposes and are not maintained. Users of the data should carefully consider whether the information contained within this column is fit-for-purpose.

8.6.6 Goods and Services Tax (GST)

At no stage during the transfer of land, or valuation of land processes, does Landgate capture or identify if and where GST is payable, has been paid or withheld.

8.6.7 Property Attributes (improvements)

Property attributes or improvements recorded against a property are the known attributes at the time of sale. This information is recorded following advice from multiple sources:

- Advice from Local Government
- Department of Planning Lands and Heritage
- Department of Fire and Emergency Services
- Water Corporation
- General Public
- Site inspections where required (more particularly for industrial and large commercial sites), at the time of valuation.

8.6.8 Dealing Document Types [DOC_TYPE1]

A Dealing Document Type is a 2-character code that uniquely identifies the document type used within the Land Titling System, the codes below identify the following document types within the Sales Evidence Data.

TF - Transfer to Freehold

To transfer to freehold, a standard [Transfer of land form](#) is used. On registration, the Crown title Volume and Folio number is replaced with a freehold title Volume and Folio number. The lot and deposited plan numbers remain the same. [Please see FR-05 Transfer of Mortgage, Charge or Lease \(5.3\) Transfer of Crown Land to Fee Simple Land](#)

T - Transfer of Land

A transfer of land is used where parties agree to convey/transfer/sell land.- [TFR-01 Transfers - common scenarios](#) a standard Transfer of land form is used also known as the T1 or T2 form

TL - Transfer of Lease

A transfer of lease can be lodged for both Freehold Leases and Crown Leases.

O – Other

All other document dealing types shown within the data.

A full list of land titling documents can be found on the [Landgate website](#)

Document Type will be identified below the Document Number within the pdf report and the xlsx file.

8.7 PARCEL_ID vs LAND_ID

Both [PARCEL_ID] and [LAND_ID] fields are legacy formats derived from the land parcel identifier for the land/lot that is the subject of sale which is ultimately sourced from the survey documents lodged at Landgate.

There are 2 types of land parcel identifiers within the data and each are shown differently when comparing [PARCEL_ID] vs [LAND_ID].

- Crown Lot
- Freehold lot.

8.7.1 Freehold lot identifiers

The following examples describe the same freehold lots/land parcel identifiers for both [PARCEL_ID] and [LAND_ID].

8.7.1.1 Freehold lot [PARCEL_ID]

PARCEL_ID	Identifier type 1	Survey type (Plan, Diagram, Strata)	Survey number	Survey / plan section	Lot number	Part lot indicator	Description
1P004359 F 13X	1	P	004359	F	13	X	Freehold plan lot identifier with plan section and part lot
1P001586 15X	1	P	001586		15	X	Freehold plan lot identifier with part lot
1D007311 3	1	D	007311		3		Freehold diagram lot identifier diagram
1S004351 1	1	S	004351		1		Strata lot identifier

8.7.1.2 Freehold lot [LAND_ID]

LAND_ID	Lot number	Survey type (Plan, Diagram, Strata)	Survey number	Valuations Database Part lot number	Survey/plan section	Description
13P4359/2#F	13	P	4359	/2	#F	Freehold plan lot identifier with part lot and plan section Note '#' denotes a plan section for plan numbers < 100,000

15P1586/1	15	P	1586	/1		Freehold plan lot identifier with part lot
3D7311	3	D	7311			Freehold diagram lot identifier
1S4351	1	S	4351			Strata lot

Note: LAND_ID does not have an “identifier type”

8.7.2 Crown allotment/lot identifiers

The following examples describe the same freehold lots/land parcel identifiers for both PARCEL_ID and LAND_ID.

8.7.2.1 Crown allotment [PARCEL_ID]

PARCEL_ID	Identifier type 2 (1 numeric)	Crown District abbreviated code (5 varchar)*	Crown Allotment type (1 varchar)	Section 1 varchar)	Lot/location number (5 numeric)	Part lot indicator (1 varchar)	Description
2ALBANT00067X	2	ALBAN	T = town lot		00067	X	Albany Town Lot 67 (part)
2AVONL10184	2	AVON	L = Location		10184		Avon Location 10184
2ALBANS00196	2	ALBAN	S = Suburban Lot		196		Albany Suburban Lot 196
2AUGUSSY/00001	2	AUGUS	S = Suburban Lot	Y	1		Augusta Suburban Lot S1

For Crown Allotment District abbreviation codes, please refer to the look-up table here: [District Codes](#)

8.7.2.2 Crown allotment [LAND_ID]

LAND_ID	Crown Allotment type (1 varchar)	Crown District code (3 numeric)*	Section	Lot/location number (5 numeric)	Valuations Database Part lot number	description
---------	----------------------------------	----------------------------------	---------	---------------------------------	-------------------------------------	-------------

T4/67/2	T = Town Lot	4 = Albany		67	/2	Albany Town Lot 67 (part)
L17/10184	L = Location	17 = Avon		10184		Avon Location 10184
S4/196	S = Suburban Lot	4 = Albany		196		Albany Suburban Lot 196
S15/Y/1	S = Suburban Lot	15 =	Y	1		Augusta Suburban Lot S1

For Crown District numeric codes, please refer to the look-up table here: [District Codes](#)

9 Data Dictionary

9.1 Commercial Property Dictionary of Terms

This table describes each data field, its name, its type, width and includes a description of that field and if it has any associated attribute values.

For decoding of attribute values please refer to the lookup tables here: [sales data lookup.xlsx](#)
